Date: 12/22/2016	Time: 18:24	
Duty Officer/Responder Name: Tabayoyong	NRC Report #: 1167013	Hotline Log DataID: 2073725
Action Information		
<p>Description: OSC Tabayoyong contacted the RP regarding the oil identified in a manhole and spoke with Mike Beto. He shared that the ConEd incident report # is 253292 and the results of a sample taken from the manhole was 2ppm PCB/cable oil. Approximately 11,000 gallons of water/oil mix was pumped from the structure in order to drained/cleaned it.</p> <p>According to Mr. Beto a tank was identified and the incident is currently still pending. The location of the incident appears to be in the USCG's response jurisdiction.</p> <p>On 12/23/16, OSC Tabayoyng followed up with Paul Walsh, the reporting party. He said the tank identified in the structure was part of the cleanup by Clean Harbors as well as a oil impregnated cable. In addition to the 11,000 gallons of water/oil mixture that was pumped out, approximately 10,000 pounds of soil/sludge was removed. Repair of the structure is still taking place and a closeout report is expected in the next couple of days.</p>
